## UNDERWATER QUANTUM (PAR) METERS | MQ-510 & MQ-210

### **Features**

Apogee Instruments PAR meters are the tool of choice for cost-effective, scientific-grade measurement of underwater PAR levels. Accurate tank PAR mapping, daily light integral measurements, and the adjusting of photosynthetic radiation levels to mimic nature are all critical to specimen health. Apogee offers two different underwater calibrated meters at two different price points. The basic MQ-210 features our original detector that is excellent for broadband light sources. The research-grade MQ-510 features an improved detector excellent for all light sources, including LEDs, and matches LI-COR and Kipp & Zonen PAR sensors in accuracy while costing much less.

#### **Designed for Underwater Use**

Sensor heads are fully epoxy potted to be completely waterproof. Diffuser is cosine corrected for accurate 2-pi PAR-mapping. Sensor readings are adjusted in firmware to correct for the immersion effect.

### Accurate, Stable Measurements

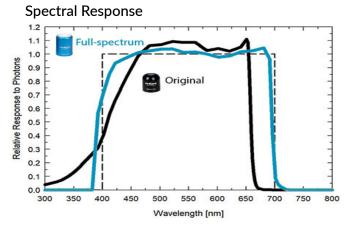

Long-term testing with multiple replicate sensors and customer data show measurement accuracy drifts less than 2 % per year.

#### **Datalogging Capabilities**

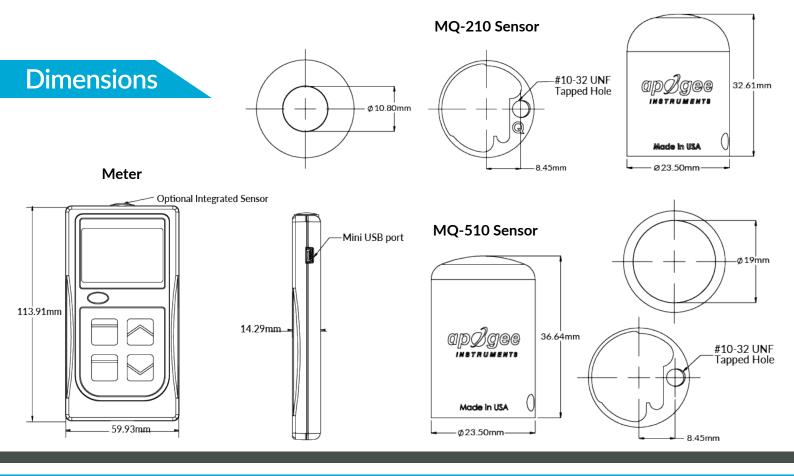

The meter records up to 99 measurements in logging mode, making automatic measurements every 30 seconds and recording 30-minute averages. Data can be downloaded to calculate DLI.

### **NIST Traceable Calibration**

Apogee Quantum sensors are calibrated by comparison to the mean of four transfer standard sensors under a reference lamp. The reference sensors are recalibrated regularly to a halogen lamp traceable to the National Institute of Standards and Technology. Calibration certificates are available upon request.

Mean **spectral response** measurements of six replicate Apogee MQ-210 and MQ-510 series quantum sensors. Spectral response measurements were made at 10 nm increments across a wavelength range of 300 to 800 nm in a monochromator with an attached electric light source. Measured spectral data from each quantum sensor were normalized by the measured spectral response of the monochromator/electric light combination, which was measured with a spectroradiometer.
